Your-Site

Complete Web-Novel Reading Platform

Full Feature Guide

WHAT READERS GET + WHAT YOU CONTROL

This guide explains every feature in plain language, in two parts. Part A is what your visitors and members experience on the site. Part B is what you, the owner, control from the admin dashboard — no coding needed.

PART A — What Your Readers Get

Reading the novels

- **Chapter reader —** A clean, full-width reading page with no clutter, built for long reading sessions on phone or desktop.
- **6 reading themes —** Readers choose Light, Dark, Gray, Sepia, Night (true black) or Forest — whichever is easiest on their eyes.
- **Day / Night mode —** A one-tap light/dark switch for the whole site that is remembered on their device.
- **Adjustable text size —** Readers make the text bigger or smaller across the entire site from their settings.
- **Font choices —** Several reading fonts, including serif options, so each reader reads comfortably.
- **Listen aloud (Text-to-Speech) —** A built-in audiobook-style player reads any chapter out loud in natural voices and multiple languages — great for commuting or resting the eyes.
- **Bookmarks —** A reader saves their exact spot in a chapter and jumps straight back to it later.
- **Highlights —** Readers highlight favourite lines and paragraphs and revisit them anytime from their account.
- **Continue Reading —** The homepage shows each logged-in reader the novels they were reading, so one tap gets them back in.
- **Reading history —** A full list of everything a reader has read, so they never lose a story.

Finding new stories

- **Browse & categories —** Novels are organised into genres with colourful genre tiles for quick browsing.
- **Tags —** Readers explore novels by theme using tags.
- **Instant search —** A search box in the header shows matching novels as the reader types.
- **Advanced search —** Readers narrow results using several filters at once.
- **Recommended For You —** Personalised novel suggestions on the homepage.
- **This Week's Top 10 —** A swipeable chart of the week's most popular novels, numbered 1 to 10.
- **Leaderboard —** Top readers and reading streaks, which keeps regulars engaged and coming back.
- **New / Popular / Completed rows —** Homepage rows for New Arrivals, Most Viewed, Popular and Completed novels.
- **Ratings & reviews —** Readers rate novels with stars and leave written reviews to help others choose.
- **Author profiles —** Every author has a public page listing all their novels.

Coins, unlocking & spending

- **Coin wallet —** Each reader has a coin balance and a full history of what they bought and spent.
- **Buy coins —** Readers top up by buying the coin packages you offer.
- **Unlock premium chapters —** Locked chapters are opened by spending coins or with an active subscription.
- **Subscriptions —** Readers subscribe to a monthly or yearly plan for its benefits, such as ad-free or premium access.
- **Choice of currency —** Prices are shown in USD, INR, or any other currency the owner has added.
- **Invite friends —** Readers get a referral link and earn bonus coins when friends join — which grows your audience for free.
- **Reading streaks & goals —** Daily reading streaks and a weekly goal reward readers with bonus coins for coming back.

Create stories with AI (optional)

- **AI Story Studio —** Readers turn an idea into a real, readable novel — they pick a genre, describe the story, and write chapters together with the AI.
- **Generate & continue chapters —** The AI writes the next chapter on demand and keeps an existing story going.
- **Consistent characters & plot —** The AI remembers characters and events so the story stays coherent across chapters.
- **Download as PDF —** Readers export their finished AI novel as a PDF to keep.

Community — "Let's Gossip"

- **Channels & topics —** Readers chat in discussion channels and start their own topics about the novels.
- **Live & real-time —** A live online count and typing indicators make it feel active and social.

Their account & security

- **Easy sign-up —** Readers register with email, with verification to keep accounts genuine.
- **Email verification —** New readers confirm their email address with a one-time code sent to their inbox.
- **Face ID / Fingerprint / Passkey —** Readers sign in with their device's own biometrics — fast and secure (WebAuthn).
- **Profile & avatar —** Readers set a display name, short bio and profile picture.
- **Notifications —** Alerts for new chapters, replies and updates, with a do-not-disturb option.
- **Stay logged in —** Secure long sessions so readers aren't asked to log in every visit.

On their phone

- **Install as an app (PWA) —** Readers add the site to their phone's home screen and use it like a native app.
- **Mobile-first design —** Built for phones first, where most readers are, with a bottom tab bar for quick navigation.

PART B — What You Control (Owner / Admin)

A full dashboard to run the whole site yourself — no coding needed.

Novels & chapters

- **Novel manager —** Add, edit, hide and organise unlimited novels and chapters from one place.
- **Bulk chapter import & export —** Upload many chapters at once, or download a novel's chapters as a ZIP and import them back later.
- **Categories, genres & tags —** Create your own genres and tags to organise the library.
- **Author submissions —** Let other writers submit novels, and approve or reject them before they go live.
- **Analytics —** See views and performance for your novels.
- **Chapter search index —** Powers fast in-site search across all chapters.

Making money

- **Coin packages —** Create coin bundles and set their prices.
- **Subscription plans —** Build monthly/yearly plans, set benefits and prices, and manage subscribers.
- **Premium pricing —** Decide which chapters are free and which cost coins, per novel or per chapter.
- **Currencies —** USD and INR are built in; add any of 140+ world currencies with your own exchange rate.
- **Payment settings —** Turn on Stripe, PayPal and Razorpay and enter your own keys.
- **Webhook logs —** A record of every payment event so nothing is ever lost.
- **Coins & subscriptions switch —** Turn the whole paid system on or off with one setting.

AI tools (optional)

- **AI settings —** Switch AI features on/off and connect Google Gemini or OpenAI with your own API key.
- **AI grammar check & rewrite —** Clean up or rewrite chapter text with AI while editing a chapter.
- **AI chapter generator —** Generate chapters yourself from the admin side.
- **Novel AI memory & characters —** Manage the story memory the AI uses to stay consistent.
- **AI token packages —** Sell AI usage as token bundles — an extra income stream.
- **AI dashboard & profit calculator —** Track AI usage and earnings, and price AI features for profit.

Readers & community

- **User manager —** View, search, edit and manage every member.
- **User activity & recent visitors —** See what's happening on your site in real time.
- **WordPress user import —** Bring members over from an existing WordPress site.
- **Import / export users —** Move your member list in and out easily.
- **Login & sign-up access —** Control who can register and whether login is required.
- **Gossip settings & moderation —** Manage the community forum, its channels, and block abusive users.
- **Comments & reports —** Moderate all comments and review content reported by readers.

Look & content of the site

- **Branding —** Set your own logo, site name, colours and favicon.
- **Homepage sections —** Switch each homepage row on or off and arrange your front page.
- **Menus & custom pages —** Build your own navigation menus and create custom pages.
- **Image gallery —** Manage covers and images in one library.
- **Announcements & site banner —** Post a message to all readers at once.

- **FAQ & quick contact —** Edit the homepage FAQ and contact details.
- **Custom code & ads —** Paste in analytics or ad-network code without touching files.
- **Advanced search & My Account sections —** Turn optional reader features on or off.

Protecting your content

- **Reader watermark —** An invisible, per-reader mark on chapters so you can trace who leaked copied content.
- **Hidden reader mark —** A second, concealed tracing mark for stronger protection.
- **Reading-speed / scraper limits —** Slow down bots that try to copy your whole library at once.
- **Search & bot protection —** Keep unwanted crawlers out.

Running the site

- **Admin dashboard —** Novels, users, payments, comments and AI at a glance on one screen.
- **Backup & restore —** One-click database backups you can restore from.
- **Database config —** Manage the site's database connection from the panel.
- **Security settings —** Login lockout after failed attempts, Google reCAPTCHA, and two-factor authentication (authenticator app) for admin accounts.
- **Site health —** Automatic error logging so problems are noticed, not hidden.
- **Construction / maintenance mode —** Take the site offline cleanly while admins keep working.
- **Weekly email digest —** An automatic weekly round-up that brings readers back.
- **Notifications settings —** Control the alerts readers receive.
- **License page —** See your licence status and the domain it is active on.

You also get 10 ready-made legal pages (About, Contact, FAQ, Privacy Policy, Terms, Cookie Policy, Disclaimer, DMCA, Community Guidelines, Refund Policy), a one-domain licence key, and the full source code.
